PERTH, Australia, Dec. 04, 2025 -- [FireFly Metals Ltd.](#) (ASX: FFM, TSX: FFM) (FireFly or Company) is pleased to announce a highly successful equity raising which will underpin a concerted resource growth campaign and progressing upscaled mining studies at its Green Bay Copper-Gold Project in Canada.

FireFly has received firm commitments for ~A\$134.1 million (before costs) via the issue of up to approximately 77.1 million fully paid ordinary shares in the Company (New Shares) under the Equity Raising (defined below).

FireFly Managing Director Steve Parsons said: *"This highly successful raising means we can embark on a no-holds-barred drilling campaign aimed at creating further shareholder value in a very timely manner.*

"We will increase the drilling fleet to nine rigs as part of an aggressive onslaught targeting extensions to known mineralisation and new regional prospects.

"We are also progressing towards a Final Investment Decision by derisking the Green Bay Copper-Gold Project by embarking on Upscaled Mining Studies which are expected to be completed in the first half of CY26.

"The name of the game at Green Bay is clearly drive value through the drill bit and derisk a large scale copper-gold project. So that's exactly what we are going to do".

Metal equivalents

Metal equivalents for the Mineral Resource Estimates have been calculated at a copper price of US\$8,750/t, gold price of US\$2,500/oz and silver price of US\$25/oz. Individual Mineral Resource grades for the metals are set out in Appendix A of this announcement.

Metallurgical factors have been applied to the metal equivalent calculation. Copper recovery used was 95%. Historical production at the Ming Mine has a documented copper recovery of ~96%. Precious metal (gold and silver) metallurgical recovery was assumed at 85% on the basis of historical recoveries achieved at the Ming Mine in addition to historical metallurgical test work to increase precious metal recoveries.

In the opinion of the Company, all elements included in the metal equivalent calculation have a reasonable potential to be recovered and sold based on current market conditions, metallurgical test work, the Company's operational experience and, where relevant, historical performance achieved at the Green Bay project whilst in operation.

Copper equivalent was calculated based on the formula $CuEq(\%) = Cu(\%) + (Au(g/t) \times 0.82190) + (Ag(g/t) \times 0.00822)$.
