

# Belmont Resources Inc. Completes ReLogging of 2008 Drill Core at Crackingstone Uranium Project, Saskatchewan

11.12.2025 | [The Newswire](#)

[Belmont Resources Inc.](#) (TSX-V: BEA; FSE: L3L2) ("Belmont" or the "Company") is pleased to report that Axiom Exploration Group Ltd. ("Axiom") has now completed the relogging and resampling program of drill core from Belmont's historic 2008 Crackingstone drill campaign at the Company's 100%-owned Crackingstone Uranium Project, located near Uranium City, northern Saskatchewan.

Axiom mobilized a technical team to inspect, re-log, and selectively resample drill core preserved from twenty historical drill holes totaling 3,029.4 metres. The core is stored in Uranium City and remains in good condition for detailed re-examination.

pXRF of Crackingstone 2008 drill core

Since the original 2008 program, there have been major advancements in geological understanding of the Beaverlodge Domain as well as significant improvements in analytical methods for identifying and characterizing uranium and rare earth element (REE) mineralization. During the 2008 program, only limited intervals showing visible uranium were submitted for U<sup>3+</sup> analysis.

The newly completed relogging program incorporates:

- Systematic portable X-ray fluorescence (pXRF)
- Visible and near-infrared spectroscopy (VNIR)
- Refined lithological logging and structural measurements
- Targeted resampling of mineralized zones and alteration halos

Objectives of the Program

The work completed by Axiom is designed to:

- Generate comprehensive geochemical datasets to better characterize uranium mineralization, alteration, and pathfinders across the full length of the 2008 drill core.
- Update lithological and structural interpretations to support refined geological modelling and future drill-target planning.
- Evaluate the potential for REE mineralization within thorium-rich pegmatites, which have been mapped on the property and may provide additional commodity upside.
- Integrate new results with historic datasets, geophysical surveys, and regional geology to help delineate new priority drill targets for upcoming 2026 exploration programs.

"Modern relogging of the historical Crackingstone core gives us an entirely new window into this uranium system," said George Sookochoff, Chairman of Belmont Resources. "The combination of pXRF, VNIR,

refined geological logging, and updated structural interpretation provides the level of detail we need to define strong drill targets for 2026. This work moves Crackingstone another step forward."

Drill samples have been sent to SRC Geoanalytical Laboratories, Saskatoon, Saskatchewan for analysis.

[Click Image To View Full Size](#) Belmont will provide an update once analytical results and interpretive work from the relogging program are finalized.

NI 43-101 Disclosure:

The technical and scientific information in this news release has been reviewed and approved by Laurence Sookochoff, P.Eng. Technical Advisor of the Company, who is a Qualified Person as defined by NI 43-101

About Belmont Resources Inc.

Belmont Resources (TSX-V: BEA; FSE: L3L2) is a Canadian resource company focused on advancing a diversified portfolio of discovery-stage assets including Crackingstone (Uranium-REE, SK), Come By Chance (Copper-Gold Porphyry/CRD, BC), Athelstan-Jackpot (Gold, BC), Kibby (Lithium, Nevada), and Lone Star (Copper-Gold, Washington).

ON BEHALF OF THE BOARD OF DIRECTORS

"George Sookochoff"

George Sookochoff, Chairman

Neither the TSX Venture Exchange nor its Regulation Services Provider (as the term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this news release.

This Press Release may contain forward-looking statements that may involve a number of risks and uncertainties, based on assumptions and judgments of management regarding future events or results that may prove to be inaccurate as a result of exploration and other risk factors beyond its control. Actual events or results could differ materially from the Companies forward-looking statements and expectations. These risks and uncertainties include, among other things, that we may not be able to obtain regulatory approval; that we may not be able to raise funds required, that conditions to closing may not be fulfilled and we may not be able to organize and carry out an exploration program in 2023, and other risks associated with being a mineral exploration and development company. These forward-looking statements are made as of the date of this news release and, except as required by applicable laws, the Company assumes no obligation to update these forward-looking statements, or to update the reasons why actual results differed from those projected in the forward-looking statements.
