

San Lorenzo Gold Corp. Cuts 5 Sections of Mineralization Totalling 222.4 m in First Hole of Current Drilling Program

26.01.2026 | [The Newswire](#)

[San Lorenzo Gold Corp.](#) ("San Lorenzo" or the "Corporation") (TSXV: SLG) is pleased to provide assay results from the first hole of its current drilling program at Salvadora, San Lorenzo's flagship property in Chile.

The results from Hole SAL 04-25, the first hole drilled in the current campaign and the 4th hole drilled at the Cerro Blanco porphyry target, are summarized in the table and on the drill hole section below:

CERRO BLANCO ASSAY RESULTS - SAL 04-25

Hole #	Sector	Intercept	From(m)	To(m)	Width(m)	Au g/t	Ag g/t	Cu %
	A	2.0	17.6	15.6	1.2	2.7	0.06	
	B	167.5	177.5	10.0	0.92	0.4	0.04	
SAL-04-25	Cerro Blanco C	201.5	333.7	132.2	1.09	0.3	0.05	
	D	389.5	443.5	54.0	1.05	0.3	0.05	
	E	461.5	472.2	10.7	1.33	0.3	0.06	

The mineralization is assumed to represent the upper levels of a mineralized porphyry system and the results suggest continuation - to the northeast - of the system encountered in the first two holes drilled last year on the east side of the Cerro Blanco litho-cap feature.

The location of the three holes SAL 01, 02 and 04 - 25, are displayed on the image below. SAL 04 - 25 is located approximately 350 meters northeast of SAL 01 - 25 and was drilled on a chargeability/resistivity anomaly identified during last years' geophysical program that provided expanded IP coverage on the Cerro Blanco and Arco de Oro targets located on the Salvadora property.

The image also displays the location of chargeability anomalies on three IP lines at Cerro Blanco (orange oval) - 2 of which were acquired in 2018 and the middle line acquired in 2025 - and their relationship to the limited drilling completed so far on the east side of the Cerro Blanco litho-cap feature.

San Lorenzo is hopeful that the system extends further to the northeast (yellow highlight) to where significant alteration can be seen from the valley floor, 1.7 kilometers to the northeast (image below). Further IP followed by drilling is warranted and will be undertaken by San Lorenzo.

Qualified Person

The scientific and technical information contained in this news release has been reviewed and approved by Terence Walker, M.Sc., P. Geo., who is a "qualified person" within the meaning of National Instrument 43-101.

Drill Hole Data

Drill hole data, including individual assay results, will be available on San Lorenzo's website: www.sanlorenzogold.ca.

About San Lorenzo

San Lorenzo is focused on advancing its flagship Salvadora property located in Chile's mega-porphyry belt with the phase 6 drilling program currently underway on 2 of 5 targets identified at Salvadora. Results obtained from prior phases of drilling - conducted on 4 different targets so far - have convinced management that several significant gold and copper enriched epithermal and/or porphyry style systems are contained within the Salvadora property.
