

Ellis Martin Report: Meryllion Resources Ltd: Discusses Nevada Gold, Antimony and Tasmania Rare Earths Strategy

29.01.2026 | [ABN Newswire](#)

Malibu, CA, United States - Meryllion Resources Ltd (CNSX:MYR) (OTCMKTS:MYRLF) was recently featured on The Ellis Martin Report on Money Talk Radio, where Managing Director Rick Revelins discussed the company's diversified exploration portfolio spanning Nevada and Tasmania.

Meryllion is advancing a gold, silver, and antimony project in Nye County, Nevada, located near established producers, including Kinross Gold's Bald Mountain operation. The company believes the project has potential for epithermal, low-sulfidation mineralization and is preparing to advance permitting and exploration activities ahead of drilling.

In addition to its Nevada assets, Meryllion is developing an ionic clay rare earths project in Tasmania, Australia. Ionic clay rare earth deposits differ from traditional hard-rock projects in that they are generally shallower, lower cost to drill, and potentially simpler to process using heap-leach techniques. These characteristics may offer capital and operating advantages compared with conventional rare earth developments.

During the interview, Mr. Revelins outlined the geological rationale behind the company's asset selection, recent financing activity, and plans to advance both projects through exploration and drilling. He also discussed the growing strategic importance of antimony and rare earth elements within global critical minerals supply chains.

Meryllion Resources is focused on advancing its projects through systematic exploration while operating in established mining jurisdictions with supportive infrastructure and regulatory frameworks.

About The Ellis Martin Report:

The Ellis Martin Report (EMR) and Money Talk Radio feature interviews with industry leaders in mining, biotech, energy, and technology. The program is globally syndicated through multiple financial platforms and streaming services.

About Meryllion Resources Ltd:

Meryllion Resources Ltd (CNSX:MYR) (OTCMKTS:MYRLF) is an exploration stage company listed on the Canadian Securities Exchange. The Company recently entered into a lease and option agreement in respect of the Makenzie gold/silver/antimony project located 44 kms south southwest of Austin, Nevada in the Toiyabe Range of central Nevada. Makenzie is one of the largest known untested gold, silver and antimony anomalies in the state of Nevada.

Meryllion also has the rights to acquire up to a 100% interest in the Westbury and Tasmanian Strategic Green Metals ionic adsorption clay (IAC) hosted rare earth elements (REE) projects located in northeast Tasmania, Australia with a total tenement area of approximately 800 kms². Meryllion's IAC REE projects are situated along strike, and/or adjacent to, discoveries by [ABx Group Ltd.](#) (ASX:ABX). ABx has reported that Tb (Terbium) and Dy (Dysprosium) concentrations in all of ABx's rare earths resources are the highest of any ionic adsorption clay deposit in Australia and are amongst the highest globally. (refer ABx ASX announcement dated 5 May 2025).
