

San Lorenzo Gold Corp. Cuts Mineralization in Next Holes of Ongoing Drilling Program

02.03.2026 | [The Newswire](#)

[San Lorenzo Gold Corp.](#) ("San Lorenzo" or the "Corporation") (TSXV: SLG) is pleased to provide assay results from the ongoing drilling program at Salvador, San Lorenzo's flagship property in Chile.

Arco de Oro Target

Partial results from SAL 09 - 25, the first hole drilled on the Arco de Oro target in the current program, are presented below:

Hole	Sector	Intercept From	To	Width(m)	Au g/t	Ag g/t	Cu%	
Assay Results From Surface to 223.0 metres Pending								
	A	223.0	232.0	9.0	1.07	1.0	0.10	
	B	238.2	296.7	58.5	1.07	0.6	0.10	
	including	270.0	281.1	11.1	3.78	1.4	0.34	
	including	277.4	279.0	1.6	8.53	3.6	0.75	
	C	307.7	368.0	60.3	1.01	0.4	0.09	
	including	342.0	366.0	24.0	1.46	0.5	0.12	
SAL-09-25	Arco de Oro	D	380.0	420.2	40.2	0.58	0.3	0.05
	including	384.0	393.0	9.0	1.01	0.3	0.07	
	E	423.7	480.0	56.3	0.46	0.3	0.04	
	F	486.0	528.0	42.0	0.76	0.5	0.07	
	including	517.0	528.0	11.0	1.36	0.8	0.12	
	G	542.0	554.0	12.0	0.76	0.6	0.08	
Open Below								

The first two holes at Arco de Oro were drilled on IP line D8 - a line completed during the summer of 2025 that stepped out 3.9 km to the northwest of the Arco de Oro "core zone". The hole locations in relation to an IP chargeability anomaly on line D8 are illustrated below:

San Lorenzo has not yet received assay results from the upper (surface to 223.0 metres) portion of the hole and are expected within the next 2 weeks.

Commenting on the partial results from hole SAL 09 - 25, Terence Walker, San Lorenzo's VP of Exploration

commented: "It is gratifying to see the trend continue fully 3.9 km further northwest from the northernmost hole we drilled previously on Arco. We look forward to complete results from Hole SAL 9 - 25 and the numerous other nearby holes that have now been drilled in the Arco northwest extension".

Cerro Blanco Target

Three holes (SAL 05 - 25, SAL 06 - 25 and SAL 07 - 25) were drilled on the westerly extension to IP line C2 that was completed during the summer of 2025. Results from those holes are presented below:

Cerro Blanco Drill Hole Intercepts

Hole	Target	Intercept	From	To	Width(m)	Au g/t	Ag g/t	Cu%
SAL-05-25	Cerro Blanco	A	131.5	167.5	36.0	1.53	0.4	0.07
		B	181.8	191.5	9.8	0.96	0.3	0.05
		C	255.4	265.6	10.2	0.68	0.2	0.03
		D	277.6	300.0	22.4	0.75	0.2	0.04
SAL-06-25	Cerro Blanco	A	11.6	17.0	5.4	0.73	0.3	0.03
		B	221.0	254.0	33.0	0.76	0.5	0.03
SAL-07-25	Cerro Blanco	A	155.0	177.4	22.4	0.57	0.3	0.03
		B	210.4	217.2	6.8	2.15	0.4	0.10

The location of the three holes drilled on the west side of the Cerro Blanco litho-cap feature, together with their relation to IP line C2, are illustrated below:

[Click Image To View Full Size](#)

The 3 Cerro Blanco holes drilled on the west side of the litho-cap feature followed the drilling of hole SAL 04 - 25 on the east side of the litho-cap feature (see San Lorenzo press release dated January 26, 2026).

Commenting on Cerro Blanco, Terence Walker commented: "Indications are that the Cerro Blanco system is stronger on the east side of the litho-cap feature. However, and based on the overall width of the mineralized intercepts we have received, the recent holes on the west side confirm the significant breadth of the Cerro Blanco system. We look forward to continued drilling at Cerro Blanco".

Drilling Continues

The 13th hole of the ongoing drill program is underway - it being the 9th hole at Arco de Oro. Management of San Lorenzo has expanded the scope of the Arco de Oro drilling program to include the testing of several anomalies identified in San Lorenzo's 2018 IP program

Additional Assay Information

San Lorenzo expects that assay results from the holes already drilled on the Arco de Oro target will be available on a regular basis over the coming months. San Lorenzo looks forward to providing stakeholders with regular updates as assay results are obtained. The correlation between sample intervals and true widths are unknown as the systems are still being modeled.

Qualified Person

The scientific and technical information contained in this news release has been reviewed and approved by Terence Walker, M.Sc., P. Geo., the VP of Exploration of San Lorenzo who is a "qualified person" within the meaning of National Instrument 43-101.

Testing Procedures

Samples consisting of 50% of the HQ core are delivered to the ALS Laboratories in Copiapó by San Lorenzo staff for preparation which consists of drying and crushing to a 2 mm mesh and then pulverized. The sample material is then delivered to ALS's facilities in Lima, Peru for gold analysis using the fire assay method. Samples also analysed by aqua-regia digestion to analyse for other elements including Ag and Cu.

Drill Hole and Assay Data

Drill collar data, including individual assay results from each of the holes presented in this news release, will be available on San Lorenzo's website: www.sanlorenzogold.ca under the Salvadora sub-heading "Drill Hole and Assay Data".

About San Lorenzo

San Lorenzo is focused on advancing its flagship Salvadora property located in Chile's mega-porphyry belt with the phase 6 drilling program currently underway on 2 of 5 targets identified at Salvadora. Results obtained from prior phases of drilling - conducted on 4 different targets so far - have convinced management that several significant gold and copper enriched epithermal and/or porphyry style systems are contained within the Salvadora property.
