

# Myriad Uranium Doubles Land Position at Copper Mountain Uranium Project

10.03.2026 | [Newsfile](#)

Vancouver, March 10, 2026 - [Myriad Uranium Corp.](#) (CSE: M) (OTCQB: MYRUF) (FSE: C3Q) ("Myriad" or the "Company") is pleased to announce a significant expansion of its land position at the Copper Mountain Uranium Project in Wyoming, increasing total holdings from approximately 9,439 acres to approximately 18,351 acres. This acreage now covers all key areas and targets across the Copper Mountain district. See Figures 1 and 3 below.

The expanded staking program was guided by results from the Company's recent high-resolution radiometric and magnetic survey. Notably, the vast majority of radiometric anomaly points identified by the survey occur in previously untested ground east of the north-south structural corridor indicated. See Figure 2 below. In contrast, all known historic uranium resources and nearly all previously identified targets at Copper Mountain are located west of this corridor. The southern areas have been added because of other highly positive characteristics.

To determine which areas to acquire, the Company integrated the new geophysical data with its existing geological dataset, including insights derived from the comprehensive studies of Copper Mountain completed by Bendix Field Engineering Corporation ("Bendix") for the U.S. Department of Energy in 1982. The Bendix study estimated uranium endowments at Copper Mountain of approximately 655 Mlbs eU<sub>3</sub>O<sub>8</sub>; to a depth of 600 feet within a broader "Assessment Area," and 245 Mlbs eU<sub>3</sub>O<sub>8</sub>; to a depth of 600 feet within a more focused "Control Area."

Following the staking update announced here, Myriad now controls approximately 62% of the Assessment Area and 80% of the Control Area, as defined in the Bendix report. Additional details regarding the Bendix studies are available in the Company's prior press release here.

Myriad's CEO, Thomas Lamb, commented: "Our recent geophysics identified the signatures of known uranium resources at Copper Mountain and illuminated an entirely new very large area to the east of known resources with a corresponding signature. See Figure 2 below and refer to our recent press release here. We quickly acquired this new large area and other areas suggested by the geophysics and our other data. Confidence is increasing that we now have one of the largest uranium projects in the United States. Based on results of our own initial drill program, we already have strong confidence in the core deposits and historic resources delineated by Union Pacific in the 1970's. As uranium prices rise, a progressively larger share of our endowment will transition into economic viability, offering strong leverage to the steadily increasing price of uranium."

The Bendix endowment figures are historical estimates and are not current mineral resource estimates prepared in accordance with NI 43-101 standards. See "Historical Estimates" below for further information.

The focus will now shift to verification of anomalies identified through the interpretation of the high-resolution geophysical surveys completed in December 2025 (reported here), followed by exploration drilling.

### Historical Estimates

While Myriad Uranium has determined that the historical estimates described in this news release are relevant to the Copper Mountain Project Area and are reasonably reliable given the authors and circumstances of their preparation, and are suitable for public disclosure, readers are cautioned to not place undue reliance on these historical estimates as an indicator of current mineral resources or mineral reserves at the Project Area. A qualified person (as defined under NI 43-101) has not done sufficient work to classify any of the historical estimates as current mineral resources or mineral reserves, and Myriad Uranium is not treating the historical estimates as a current mineral resource or mineral reserve. Also, while the Copper Mountain Project Area contains all or most of each deposit referred to, some of the resources referred to may be located outside the current Copper Mountain Project Area. Furthermore, the estimates are decades old and based on drilling data for which the logs are, as of yet, predominantly unavailable. The historical resource estimates, therefore, should not be unduly relied upon.

Inherent limitations of the historical estimates include that the nature of mineralisation (fracture hosted) makes estimation from drill data less reliable than other deposit types (e.g. those that are thick and uniform). From Myriad Uranium's viewpoint, limitations include that the Company has not been able to verify the data itself and that the estimate may be optimistic relative to subsequent work which applied a "delayed fission neutron" (DFN) factor to calculate grades. On the other hand, DFN is controversial, in that the approach is viewed by some experts as too conservative. Nevertheless, it was applied in later resource estimations by Union Pacific relating to Copper Mountain.

To verify the historical estimates and potentially re-state them as current resources, a program of digitization of available data would be required. This must be followed by re-logging and/or re-drilling to generate new data to the extent necessary that it is comparable with the original data, or new data that can be used to establish the correlation and continuity of geology and grades between boreholes with sufficient confidence to estimate mineral resources.

### Qualified Person

The scientific or technical information in this news release respecting the Company's Copper Mountain Project has been reviewed and approved by George van der Walt, MSc., Pr.Sci.Nat., FGSSA, Myriad's consulting geologist and a Qualified Person as defined in National Instrument 43-101 - Standards of Disclosure for Mineral Projects. While the content of the reports is considered to be relevant and reliable, the underlying data, such as original drill logs, sampling, analytical and test data certificates, quality assurance and quality control, is not available for verification. Further work, such as drilling and sampling, will be required to verify or create supplementary information to support the underlying assumptions and conclusions.

### About Myriad Uranium Corp.

Myriad Uranium Corp. holds a 75% interest in the Copper Mountain Uranium Project in Wyoming, USA, with a definitive agreement in place to acquire the remaining 25% interest from [Rush Rare Metals Corp.](#) Copper Mountain hosts multiple historic uranium deposits and past-producing mines, including the Arrowhead Mine (approximately 500,000 lbs U<sub>3</sub>O<sub>8</sub>; produced). The district saw extensive exploration and development by Union Pacific in the late 1970s, including approximately 2,000 boreholes and advanced mine planning prior to uranium market downturn conditions in 1980. Union Pacific is estimated to have invested approximately C\$117 million (2024 dollars) in exploration and development at Copper Mountain, generating significant historical resource estimates. The Company also holds a 100% interest in the Red Basin Uranium Project in New Mexico, hosting near-surface mineralization with expansion potential.

A news release detailing a comprehensive assessment of Copper Mountain's uranium endowment by Bendix Engineering for the US Department of Energy published in 1982 can be viewed [here](#).

**Forward-Looking Statements**

This news release contains "forward-looking information" that is based on the Company's current expectations, estimates, forecasts and projections. This forward-looking information includes, among other things, the Company's business, plans, outlook and business strategy. The words "may", "would", "could", "should", "will", "likely", "expect," "anticipate," "intend", "estimate", "plan", "forecast", "project" and "believe" or other similar words and phrases are intended to identify forward-looking information. The reader is cautioned that assumptions used in the preparation of any forward-looking information may prove to be incorrect, including with respect to the Company's business plans respecting the exploration and development of the Company's mineral properties, the proposed work program on the Company's mineral properties and the potential and economic viability of the Company's mineral properties. Forward-looking information is subject to known and unknown risks, uncertainties and other factors that may cause the Company's actual results, level of activity, performance or achievements to be materially different from those expressed or implied by such forward-looking information. Such factors include, but are not limited to: changes in economic conditions or financial markets; increases in costs; litigation; legislative, environmental and other judicial, regulatory, political and competitive developments; and technological or operational difficulties. This list is not exhaustive of the factors that may affect our forward-looking information. These and other factors should be considered carefully, and readers should not place undue reliance on such forward-looking information. The Company does not intend, and expressly disclaims any intention or obligation to, update or revise any forward-looking information whether as a result of new information, future events or otherwise, except as required by applicable law.

The CSE has not reviewed, approved or disapproved the contents of this news release.
