

Scandium Mining Releases Updated Presentation Showcasing Its Only Shovel-Ready Primary Scandium Deposit

13:00 Uhr | [Newsfile](#)

Reno, March 24, 2026 - Scandium Mining Corp. (TSXV: SCY) (OTC PINK: SCYYF) ("Scandium International" or the "Company"), a leader in the advancement of critical mineral resources, is pleased to announce the release of its updated investor presentation, now available to investors and stakeholders. The new presentation can be accessed here: [Investor Presentation](#)

The new investor presentation provides updated information on the Nyngan project in New South Wales, Australia, which is now fully shovel-ready. This project is one of only two primary scandium deposits at this advanced stage in the western world, positioning the company at the forefront of the emerging scandium market.

Scandium is an essential element in high-performance applications, including aerospace, defense, and clean power generation. Its unique properties-such as exceptional strength-to-weight ratio and improved corrosion resistance when alloyed with aluminum-make it indispensable for the next generation of lightweight, durable materials. As demand grows for advanced technologies and sustainable solutions, scandium's role is increasingly being recognized by innovative manufacturers and governments alike.

"We're excited to share this comprehensive update on our progress," said Peter Evensen, CEO of Scandium International. "With our mining license now valid over the entire resource, the project is shovel-ready and we are uniquely positioned to supply scandium at scale to industries that are shaping the future."
