## Company Comments on Increased Awareness of Natural or Geologic Hydrogen

Vancouver, April 30, 2026 - [Element One Hydrogen and Critical Minerals Corp.](#) (CSE: EONE) ("Element One" or the "Company") is pleased to report on the Canadian Hydrogen Convention held in Edmonton, Alberta on April 21st to 23rd.

The Company had a strong presence at the convention maintaining a booth and speaking on the projected impact of natural hydrogen on the de-carbonization of the transportation sector. The Element One team met with industry advocates, governments and potential research funding partners to provide updates on its hydrogen projects and technology development. The team consistently heard that technologies and projects like those being progressed by Element One are seen as a priority for providing low-carbon energy at a cost that can compete with traditional energy sources.

The Global interest in natural hydrogen development is rapidly increasing as governments, advocates and investors increasingly recognize its potential as a low-cost, low-carbon energy source. Evidence to this effect was the number of conference participants who were actively seeking information on natural hydrogen and were keen to follow Element One's progress both on a technology front as well as project development.

"Element One is well positioned to act on the rapidly increasing international interest in natural hydrogen projects and technologies", stated Tim Johnson, Chief Operating Officer of Element One, "At the Canadian Hydrogen Convention, our team repeatedly heard the message that the world needs low-cost, low-carbon fuels to meet growing energy demand - and that natural hydrogen pathways are increasingly recognized as central to meeting this need."

About Element One Hydrogen & Critical Minerals Corp.

Element One Hydrogen & Critical Minerals Corp. (CSE: EONE) is a Canadian company focused on the exploration, development, and commercialization of natural hydrogen and critical mineral resources, as well as breakthrough hydrogen-generation technologies. The Company's projects include the Foggy Mountain critical minerals project as well as projects in Alaska and British Columbia that are prospective for hydrogen production through stimulation in the subsurface as well as critical and battery metals.
