

Makenita Acquires the 23,517 Acre "Serpentinization Iron-Magnetite Project" in Saskatchewan

09:01 Uhr | [Newsfile](#)

Vancouver, May 1, 2026 - [Makenita Resources Inc.](#) (CSE: KENY) (WKN: A40X6P) (OTCID: KENYF) (the "Company" or "Makenita") is pleased to announce that has acquired the "Serpentinization Iron-Magnetite Project" in Saskatchewan. This project consists of 23,517 contiguous acres that directly borders Max Power Corp in Saskatchewan. This project is prospective for iron and magnetite.

Jason Gigliotti, President of Makenita Resources Inc., stated, "This project has a massive footprint in a known area prospective for iron and magnetite. In certain situations when you have large iron formations that are rich in specific minerals, like magnetite, you can stimulate that iron formation to produce naturally occurring hydrogen. This project directly borders Max Power Corp (Maxx). With just over 30 million shares outstanding, any success in the ground would have a meaningful impact on the Company given such a small float. Management anticipates a very active remainder of the year on multiple projects and is very optimistic about the near- and mid-term outlook for Makenita."

Qualified Person

The technical contents of this release were reviewed and approved by Frank Bain, PGeo, a director of the company and qualified person as defined by National Instrument 43-101.

About Makenita Resources Inc.

Makenita currently has several projects located in Canada. The Sisson West Tungsten Project, consisting of approximately 9,845 contiguous acres prospective for Tungsten, located in New Brunswick directly bordering

[Northcliff Resources Ltd.](#)'s (NCF) Sisson Tungsten Mine as well as the 23,517 acre "Serpentinization Iron-Magnetite Project" in Saskatchewan bordering Max Power Corp. Makenita also has the approximately 9,000 acre "NTX Rare Earth Project" in Quebec prospective for rare earths. Lastly, Makenita has the 5,542-acre Hector Property which is in the vicinity of the town of Cobalt, Ontario, which is prospective for cobalt, silver and diamonds. Management cautions that past results or discoveries on properties in proximity to Makenita may not necessarily be indicative of the presence of mineralization on the Company's properties.

This land was acquired via staking.
