

# Infield Minerals Announces Option Agreement for the Detroit Gold Property in Utah

06.05.2026 | [ACCESS Newswire](#)

VANCOUVER, May 6, 2026 - [Infield Minerals Corp.](#) (TSXV:IN) ("Infield" or the "Company") further to its press release on February 19, 2026, is pleased to announce that it has entered into a property option agreement (the "Option Agreement") dated May 5, 2026, with Hawk Resources Limited ("Hawk"), an arm's length party, pursuant to which the Company has been granted the right to acquire 100% of Hawk's legal and beneficial ownership in and to the Detroit Property (the "Option"), which consists of a series of mineral claims located in the Drum Mountains region of western Utah, USA (the "Detroit Property").

"Reaching a definitive Option Agreement on the Detroit sediment-hosted gold property is an important milestone for the Company in building our portfolio of high potential assets in the State of Utah, where there is proven world-class mineral potential," stated Evandra Nakano, President and CEO of Infield.

## Option Agreement

Pursuant to the Option Agreement, the Company has the right to acquire Hawk's 100% interest in and to the Detroit Property, in consideration of a series of cash payments (and for which Infield may satisfy one-half of any of the cash payments by issuing the equivalent value of common shares in the capital of the Company, subject to certain restrictions described below (the "Common Shares")) as follows:

1. \$40,000 within five days of the effective date of the Option Agreement;
2. \$60,000 upon the first-year anniversary of the Option Agreement;
3. \$80,000 upon the second-year anniversary of the Option Agreement;
4. \$100,000 upon the third-year anniversary of the Option Agreement;
5. \$120,000 upon the fourth-year anniversary of the Option Agreement; and
6. \$150,000 upon the fifth-year anniversary of the Option Agreement (collectively the "Option Payments").

Additionally, the following cash payments shall apply if the associated milestones set forth below are achieved, and Infield may satisfy up to one-half of any of such cash payments by issuing the equivalent value of Common Shares (collectively, the "Milestone Payments"), subject to certain restrictions described below:

1. Hawk shall be entitled to a one-time payment equal to \$1.25 for each ounce of gold identified the earlier of: (i) a Measured or Indicated mineral resource; or (ii) a Proven or Probable mineral reserve, as contained in a technical report prepared in accordance with National Instrument 43-101, subject to a 250,000 ounce minimum; and
2. Hawk shall be entitled to a one-time payment of \$1,000,000 upon achievement of aggregate production from the Detroit Property of no less than 7,500 ounces of gold.

At Infield's option, it may satisfy up to one-half of any of the Option Payments and the Milestone Payments by issuing the equivalent value of Common Shares, provided, however, that any such issuance to Hawk shall (i) be subject to an aggregate maximum issuance of 20,694,444 Common Shares and (ii) not result in Hawk holding more than 9.9% of the total outstanding Common Shares at any given time. The issue price for the Common Shares, as and when they are issued, shall be based on the 30-day volume weighted average trading price of the Common Shares on the recognized stock exchange in Canada on which the Common

Shares are listed or such other price as may be permitted by the stock exchange.

Property Highlights:

- The Mizpah mineralized zone hosts a 500 metre by 300 metre open-ended sediment-hosted gold system with potential for expansion
- Historical Mizpah drilling results<sup>1</sup> include:
  - 2.14 grams per tonne ("g/t") gold over 10.7 m (from surface; MZ-049)
  - 2.67 g/t gold over 7.6 m (from 19.8 m; MZ-104)
  - 1.19 g/t gold over 21.3 m (from 3.0 m; MZ-87-032)
    - Including 2.69 g/t gold over 7.6 m
  - 1.51 g/t gold over 16.8 m (from 3.0 m; MZ-87-048)
    - Including 2.20 g/t gold over 10.7 m
  - 1.87 g/t gold over 13.7 m (from 30.5 m; MZ-87-052)
    - Hole ended in mineralization (10.01 g/t gold in a 1.5-m sample)
- Large magmatic-hydrothermal footprint with reactive carbonate host rocks is favourable for additional discovery
- Easy logistics with established infrastructure, accessible road network traversing the Property, local mining culture and skilled workforce in Utah
- Adjacent to multiple historical mines, including the past-producing open pit Drum mine

The Detroit project is a compelling exploration opportunity within the Drum Mountains region of western Utah, situated approximately 65 kilometres northwest of the Company's Kings Canyon property and 160 kilometres southwest of the Bingham Canyon mining district (Figure 1). Approximately 5,115 acres of primarily metalliferous mineral leases with the State of Utah (The School and Institutional Trust Lands Administration) and minor unpatented mining claims (Bureau of Land Management) comprise the Property. The Property is located within a vast desert landscape characterized by modest topography and excellent infrastructure, including direct road access from Delta, Utah - less than one hour drive from the project site. This strategic location would enable Infield to leverage significant cost and logistical synergies with the Kings Canyon project.

Figure 1: Property location map showing base and precious metals mining districts.

Mining history in the Drum Mountains dates back to the late 1800s when gold, copper and manganese were extracted from the area<sup>2</sup>. Metal endowment in the district is showcased by the Mizpah sediment-hosted gold system at the Property, a nearby open-pit past producer (Drum gold mine), as well as numerous small-scale base and precious metal mines (Figure 2).

The Property hosts the Mizpah zone, a sediment-hosted disseminated oxide gold deposit with excellent continuity, located only two kilometres north of the past-producing open pit Drum mine. The open-ended mineralized footprint at Mizpah is defined by shallow drilling that measures approximately 500 metres by 300 metres. Historical drilling results in the Mizpah target area range from below detection to 10.01 g/t gold, with highlights including: 10.7 metres grading 2.14 g/t gold from surface in hole MZ-049; 7.6 metres grading 2.67 g/t gold from 19.8 metres downhole in hole MZ-104; 21.3 metres grading 1.19 g/t gold from 3.0 metres downhole in hole MZ-87-032, including 7.6 metres grading 2.69 g/t gold; 16.8 metres grading 1.51 g/t gold from 3.0 metres downhole in hole MZ-87-048, including 10.7 metres grading 2.20 g/t gold; and 13.7 metres

grading 1.87 g/t gold from 30.5 metres downhole in hole MZ-87-052 with the hole ending in a 1.5-metre sample grading 10.01 g/t gold<sup>3</sup>.

The Detroit property exhibits strong geological potential that is characterized by a highly reactive package of host rocks overprinted by hydrothermal systems. Extensive alteration across the Property includes silicification, argillization, marblization, as well as gossan zones. The existing database includes over 200 historical drill holes, rock and soil sampling, ground magnetics and induced polarization geophysics. Infield's experienced technical team will look to build upon this dataset while applying a fresh approach to exploration in the area, with a view to outline targets for drill testing.

#### Qualified Person

Technical information in this news release has been reviewed and approved by Andrea Diakow, P.Geo., a geological consultant and a Qualified Person as defined by National Instrument 43-101.

The potential quantity and grade of mineralization described herein is conceptual in nature as there has been insufficient exploration to define a mineral resource and it is uncertain if further exploration will result in targets being delineated as a mineral resource.

For more information, please contact Evandra Nakano, the CEO, President and a director of the Company, at +1 (604) 220-4691 or email: [info@infieldminerals.com](mailto:info@infieldminerals.com)

On Behalf of the Board of Directors of Infield Minerals Corp.

Evandra Nakano  
President, CEO & Director

#### About Infield

Infield Minerals is currently exploring for gold within the U.S. Great Basin. Our mission is to grow and deliver value through discovery, acquisitions and sustainable development of high quality, high potential assets for the social and economic benefits of our stakeholders. Founded in 2020, Infield is led by a team of mining entrepreneurs with extensive technical and resource evaluation experience.

Neither TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.

#### Forward-Looking Statements

Statements included in this announcement, including statements concerning Infield's plans, intentions and expectations, which are not historical in nature, are intended to be, and are hereby identified as, "forward-looking statements". Forward-looking statements include, among other matters, Infield's exploration plans, including for the Detroit property, timing of future consideration payments and achieving milestones on the Property. Forward-looking statements may be, but are not always, identified by words including "anticipates", "believes", "intends", "estimates", "expects" and similar expressions. Infield cautions readers that forward-looking statements, including without limitation those relating to Infield's future operations and business prospects, are subject to certain risks and uncertainties (including geopolitical risk, regulatory, and exchange rate risk) that could cause actual results to differ materially from those indicated in the forward-looking statements. There can be no assurance that any forward-looking statement will prove to be accurate or that management's assumptions underlying such statements, including assumptions concerning

future developments, circumstances or results, will materialize. The forward-looking statements included in this news release are made as of the date of this new release and Infield does not undertake to update or revise any forward-looking information included herein, except in accordance with applicable securities laws.

<sup>1</sup> Historical drilling results noted were collected by a third party (Western States Minerals Corp. and Western States Mining Inc.), independent from Infield, and analysed by fire assay at Barringer Laboratories Inc. in 1987. No quality assurance / quality control information is available, and Infield has not verified the historical drilling results. The reader is cautioned not to treat the historical results as current and that a qualified person has not done sufficient work to verify the results and that they may not form a reliable guide to future results. The Company considers the historical results to be relevant and the results are provided for information purposes only and may be used as a guide to plan future exploration and drilling programs. True thicknesses of the mineralized intervals have not been calculated, but are estimated to be &GreaterEqual;90% of the drilled interval.
