

EQS-News: Gold Runner Exploration: Tight Structure, Huge Potential

09:06 Uhr | [DGAP](#)

As the ice melts, hidden treasures are revealed-and when cutting-edge geophysics penetrates thick layers of volcanic rock, vast new deposit potential is unlocked. Gold Runner Exploration (CSE: GRUN | FRA: CE70) offers precisely this fascinating combination. With an extremely strategic portfolio, the company is positioning itself in two of the world's best mining jurisdictions: "high-grade" opportunities in Canada's Golden Triangle meet potentially large-volume deep-level targets in Nevada.

The company's 8,471-hectare flagship project, called Golden Girl, is located within British Columbia's geologically highly significant Stikine rock unit-just 60 kilometers west of the Eskay Creek Mine and 20 kilometers west of the Snip Mine. The real sensation here, however, is the timing: advancing glacial retreat has exposed areas that were physically inaccessible for decades.

It was precisely on these new areas that the B-ALL Syndicate-whose preliminary work had already brought the successful gold explorers Goliath Resources and Juggernaut Exploration into the spotlight-conducted its first exploration in 2024. The result is a massive, 12-by-7-kilometer, structurally controlled shear zone system.
