About the Corporation

Norse Gold's primary asset is its 100% interest in the 3,231-hectare Morris Lake Property, consisting of seven contiguous claims and three leases, 75 km north of Yellowknife. Norse Gold plans to advance this brownfields gold exploration project in the Yellowknife Greenstone Belt. Gold was initially discovered on the property in 1945. Historic work conducted has included over 15,000 meters of diamond drilling in 100 holes on the Viking Zone, and 33 holes on the Greenlee Zone along with underground development work at the Viking Zone. Several other gold zones and occurrences to be followed up on have been located on the property. The geological model for the gold mineralization is that of an Archean lode gold deposit consisting of gold-bearing veins and shoots within a structurally controlled shear-vein system.
