Lihir Gold Limited - Updates Bonikro Reserves and Resources

31.05.2010 | Marketwired

Brisbane, Australia -- (Marketwire - May 31, 2010) - Lihir Gold Limited (LGL)(TSX: LGG) (ASX: LGL) (NASDAQ: LIHR) has updated mineral reserves and resources at its Bonikro operation in Côte d'Ivoire.

Reserves

Total ore reserves at 31 March 2010 were 760,000 ounces. This compares with the previous stated reserve of 930,000 oz at October 2006. The movement in reserve is due to the following factors:

• 1. Mining depletion of 275,000 ounces • 2. An increase in the gold price assumption from US\$550/oz to US\$900/oz

• 3. Changes to the resource model

• 4. Pit re-optimisation

• 5. Changes to cost assumptions

• 6. Reduction in cut-off grade from 0.6g/t to 0.5 g/t

The latest reserve estimate does not take into account drilling since November 2009, and does not include any estimates related to the nearby Hiré district. Results received since November will be included in the next estimation which is expected to be completed later this year to coincide with the upgrade of Hiré resources and reserves and as part of the Bonikro expansion feasibility study.

The following table sets out the ore reserves by category:

Bonikro Reserves Statement - 31 March 2010

Ore Reserves: Bonik	ro, March 31,	2010 (1)		
	Tonnes	Average Grade	Con	tained Ounces
	(Million)	(Au g/t)	(Au, kozs)	
Proved	-			
Probable	16.1	1.41	729	
Sub Total	16.1	1.41	729	
Stockpile	(4)			
(Proved)	1.1	0.86	31	
TOTAL	17.2	1.38	760	

- 1. Reserves guoted for March 31, 2010 are those remaining below the March 31, 2010 mining surface, based on the February 2010 resource model.
- 2. Cut-off grade of 0.5 Au g/t as calculated using current costs.
- 3. Reserves are based on a maximum profit with an assumed life of mine gold price of US\$900 per ounce. The quantity of contained gold does not indicate the quantity that will ultimately be recovered.
- 4. Stockpile is ore above the cut-off as at March 31, 2010.
- 5. Rounding, conforming to the JORC Code, may cause some computational discrepancies

Resources

Mineral resources at Bonikro have been updated to 1,224Koz, based on the drilling up to the end of November 2009. This compares with the August 2009 resource estimate of 1,365Koz, which has since been depleted by mining. The updated resource reflects a reduction in the cut-off grade to 0.5g/t from 0.6g/t, in line with the revised gold price assumption of \$900/oz, and a revised geological model.

The mineral resources are outlined in the following table:

30.11.2025 Seite 1/3

Bonikro Resources Statement - 31 March 2010

Mineral Resources:	: Bonikro, March 31,	2010 (1)		
Resource	e Tonnes	Average	e Grade	Contained Ounces
Category	y (Million)	(Au	g/t)	(Au, kozs (2)
Indicate	ed 21.5	1.33	918	
Inferred Total	d 8.4	1.13	306	
Resource	es 29.9	1.27	1,224	

- 1. Cut-off grade 0.5 g/t. Rounding, conforming to the JORC Code, may cause some computational discrepancies
- 2. The number of contained ounces does not indicate the ounces that will be ultimately recovered. The ounces ultimately recovered and available for sale depends on whether, and to the degree which, mineral resources are converted to ore reserves

"This is a good outcome for the Bonikro operation nda underpins its value prior to the completion of the expansion feasibility," said LGL CEO Graeme Hunt, "and we expect the current drilling program to further enhance the resource base by year end."

"Bonikro is an important centre for LGL's operations in Côte d'Ivoire and provides a platform for further growth," he said.

Competent Person

The information in this report that relates to Ore Reserves at Bonikro is based on information compiled by Nick Spicer, who is a member of the Australasian Institute of Mining and Metallurgy.

Nick Spicer is employed by Lihir Gold Limited in the role of Principal Mining Engineer. He has sufficient experience, which is relevant to the style of mineralisation and the type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the "Australasian Code for Reporting of Mineral Resources and Ore Reserves". Nick Spicer consents to the inclusion in the report of the matters based on their information in the form and context in which it appears.

The information in this report that relates to Mineral Resources at Bonikro is based on information compiled by Mr Roy Kidd.

Mr Kidd is a member of the Australian Institute of Geoscientists and is a full time employee of Lihir Gold Ltd in the role of Principal Geologist. Roy Kidd has sufficient experience which is relevant to the style of mineralisation and the type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Roy Kidd consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.
