

Coral Gold Resources Ltd. Drills 6m of 3.74 g/t Au at Robertson, Nevada

08.12.2010 | [Marketwired](#)

Vancouver, British Columbia -- ([Marketwire](#)) -- 12/08/10 -- [Coral Gold Resources Ltd.](#) (TSX VENTURE: CLH) (OTCBB: CLHRF) (BERLIN: GV8) (FRANKFURT: GV8) is pleased to announce encouraging results from a further three diamond core holes drilled at Coral's Robertson property in Crescent Valley, Nevada.

These holes are part of a 15 hole diamond core program which Coral started September 16.

he holes, CC10-7 to CC10-9 are vertical and range from 400 to 600 feet in depth (122 to 183 metres) and focus on the Altenburg Hill zone. The drill program is currently on the 15th and final hole.

The program is designed to twin 2008 RC holes in order to provide material for metallurgical test work. This will consist of column leach tests by McLelland Labs in Reno, Nevada.

All samples were collected by Robert McCusker, a qualified person as defined by NI 43-101 and were fire assayed by ALS Minerals Labs using an AA finish.

Results of the three holes compared to the twinned RC holes are as follows:

Coral Gold, incorporated in 1981 continues to explore and develop a series of strategic claims along the Cortez Gold trend known as the Robertson Project. Coral has an inferred gold resource of 3.4 million ounces. The Company notes that gold assays from drilling completed in 2008 and 2010 are not included in the current 3.4-million-ounce gold-inferred resource. This data is being input into a new resource estimate. All the latest drilling and new metallurgical work will be used in a new NI 43-101-compliant independent Preliminary Economic Assessment anticipated for mid-2011. A PEA is designed to illustrate the project viability in the current cost environment.
