

Aurion Provides La Bandera Update

21.09.2010 | [Marketwired](#)

MT PEARL, NEWFOUNDLAND -- ([Marketwire](#) - Sept. 21, 2010) - [Aurion Resources Ltd.](#) ("Aurion") (TSX VENTURE:AU) is pleased to provide the following update on recent work at the La Bandera gold-silver project in Durango State, Mexico.

Ongoing field programs, including mapping, prospecting, soil and rock geochemical sampling, hand-trenching and alteration studies, continue to outline a large, un-eroded, volcanic-hosted gold-bearing epithermal system.

Recently received soil geochemical results have outlined new targets including the extension of the previously reported 1,300 metres ("m") long by up to 300 m wide Au-in-soil geochemical anomaly, by an additional 1000 m to the southeast. This open-ended anomaly near the northern end of the property is now greater than 2300 m long and 300 m wide. Individual soil samples collected on 50-100 m spaced lines at 25-50 m intervals, assayed from less than 2.0 parts per billion (ppb; 0.002 g/t) to up to 2.07 g/t Au, with 59 samples assaying greater than 50 ppb including thirteen assaying greater than 200 ppb.

Also, occurring throughout the area underlain by the soil anomaly are numerous narrow (1-30 cm wide) quartz veins exhibiting classic epithermal boiling textures including extensive silica replacement of bladed calcite and colloform banding of silica, consistent with formation in the upper levels of an epithermal system. These veins are consistently anomalous in gold and select bedrock chip samples of these quartz veins assayed 73.7, 48.4, 9.7 and 7.2 g/t Au, as previously reported. Chip-channel sampling of hand-dug trenches over portions of the soil anomaly have also returned up to 10.0 g/t Au over 1.2 m. Visible gold has been observed in three localities and several small artisanal pits and mills are present. Recent alteration studies have also identified widespread clay alteration (illite, illite-smectite, kaolinite) along the La Bandera trend and coincident with this large, undrilled, soil geochemical anomaly. The extensive clay alteration and widely distributed gold-bearing veinlets exhibiting boiling textures are interpreted as forming near the upper terminus of a significant epithermal vein system.

At the southern end of the property, newly discovered veins in bedrock have extended the system a further 2.0 km southeast of previously known extents. The veins are up to 1.5 m wide and individual bedrock samples have assayed up to 4.1 g/t Au. These veins also exhibit epithermal boiling textures.

The La Bandera epithermal gold vein system is now documented to extend over 20 kilometers. Mapping and relogging of core have documented the stratigraphic and structural position of the La Bandera trend mineralization in the upper portions of a structure controlling a regional scale monoclinical fault propagation fold. This setting, combined with extensive evidence of shallow level, gold mineralization is highly permissive for the existence of significant mineralization at depth.

"The work we have done to date supports our interpretation that La Bandera represents the upper levels of a large, mineralized, epithermal system", stated Mike Basha, President and CEO of Aurion. "Moreover, the recent, model-driven, success at Ixtaca by Almaden Minerals drill-testing beneath the upper levels of a similar-type epithermal system, supports our initiative at La Bandera and further enhances its prospectivity. The next logical step is geophysics to further define drill targets".

Aurion is seeking joint venture partners to advance the property.

QA/QC

ALS Chemex, a certified commercial laboratory, performed the analytical testing at their facilities in Vancouver, BC. Samples were transported to a trucking company in Durango by Aurion personnel. The trucking company under contract to ALS Chemex transported the samples to the ALS Chemex prep. facility in Zacatecas. Gold analyses were by 30 gm fire assay with an ICP finish. Multielement analyses were by ICP. A quality assurance/quality control program is in place from sample collection through to laboratory analysis.

About Aurion

Aurion is focused on early stage precious metals exploration in Canada and Mexico. It currently has

approximately 18,821,455 shares issued and outstanding and is well-financed. Its strategy is to advance its projects to a stage which will attract potential joint venture partners. Aurion continues to evaluate other gold-silver projects for acquisition in Mexico and globally.

Mike Basha, P.Eng., P.Geo., President and CEO of Aurion, is the Qualified Person as defined by National Instrument 43-101, and is responsible for the preparation of this release.

All dollars are in Canadian currency unless otherwise stated.

Forward-Looking Statement

Certain statements contained in this release constitute forward-looking information. These statements relate to future events or future performance. The use of any of the words "could", "intend", "expect", "believe", "will", "projected", "estimated" and similar expressions and statements relating to matters that are not historical facts are intended to identify forward-looking information and are based on Aurion's current beliefs or assumptions as to the outcome and timing of such future events. Actual future results may differ materially. Various assumptions or factors are typically applied in drawing conclusions or making the forecasts or projections set out in forward-looking information. Those assumptions and factors are based on information currently available to Aurion. The material factors and assumptions include: regulatory approvals being obtained for the issuances of the Aurion Shares referenced herein, no changes to existing Exchange Policies, exploration programs for Aurion remaining the same as forecast, Aurion having the necessary capital in order to complete its anticipated work program on the La Bandera Properties and no significant decrease in the price of gold. Risk Factors that could cause actual results or outcomes to differ materially from the results expressed or implied by forward-looking information include, among other things: risks related to exploration activities, general economic and business conditions and changes in the regulatory regulation. Aurion cautions the reader that the above list of risk factors is not exhaustive. The forward-looking information contained in this release is made as of the date hereof and Aurion is not obligated to update or revise any forward-looking information, whether as a result of new information, future events or otherwise, except as required by applicable securities laws. Because of the risks, uncertainties and assumptions contained herein, investors should not place undue reliance on forward-looking information. The foregoing statements expressly qualify any forward-looking information contained herein.

On behalf of the Board,

Michael Basha
President & CEO
